Time taken 1 hour 9 mins

Question $\bf 1$

Complete

Marked out of 0.50

In multiplication instruction, the upper half of the result is nonzero implies which state of Carry flag and Overflow flag?

Select one or more:

- OF=1
- CF=1
- ✓ OF=0
- ✓ CF=0

Question $\bf 2$

Complete

Marked out of 1.00

Which is correct about dual-layer DVD?

Select one:

- the same as double-sided DVD
- contains layers on both sides of the disk for writing data to
- contains two layers on a single side for writing data to
- DVD drives has double laser head for reading from or writing to this disk

Question 3

Complete

Marked out of 1.00

For better speed, in CPU design, engineers make use of the following techniques:

Select one or more:

- Pipelining
- Branch prediction
- Faster CPU internal bus
- Speculative execution

Consider the following assembly instruction sequence XR Rx, RX CMP DL, 5 LE a label LMP DL,17h LSG a_label MOV BX, 10h a_label: INC BX watch point: Choose correct value of BX register at watch point for different value of DL? DL=0Ah	A						
Marked out of 1.00 CMP DL, 5 LLE a Jabel	_						
I.E a_label CMP DL_17h JGE a label MOV BX, 10h a_label: INC BX watch point: Choose correct value of BX register at watch point for different value of DL? DL=0Ah	Complete						
CMP DL_17h JGE a_label MOV BX, 10h a_label: INC BX watch point: Choose correct value of BX register at watch point for different value of DL? DL=0Ah 01h DL=0Fh 11h DL=10 01h DL=17h 11h Complete What is the meximum data transfer rate across the bus that this microprocessor can sustain? Select one: 4 MB/s 1 MB/s 5 MB/s 10 MB/s Select correct definition of seek time, rotational delay, access time, transfer time for hard drives with moveable head system: rotational delay time for the sector in the request track to reach the head veek time time for the head to settle at the request track Question 7 Complete Marked out of 1.00 Which are the correct actions for LODSW string operation if DF is reset (=0) Select one or more: Gecrease DI by 2 Load 16-bit value at memory location pointed by ES:[DI] into AX Load 16-bit value at memory location pointed by DS:[SI] into AX	Marked out of	JLE a_label CMP DL,17h

Question 8

Complete

Marked out of 1.00

In computer organization, the CPU transfer rate is much higher than that of memory. It is easy to match performance of these components by:

Select one:

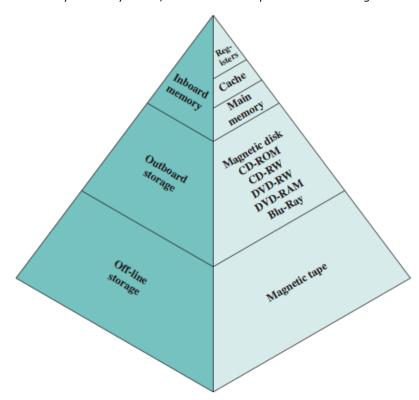

- increase the bus speed
- producing faster memory module
- Introducing cache memory
- increase I/O speed

Question 9

Complete

Marked out of 1.00

For memory hierarchy below, which relationship hold when moving downward

Select one or more:

- Decreasing cost per bit
- the processor accesses more often
- Increasing access time
- Decreasing frequency of access by the processor
- Increasing capacity

Question 10

Complete

Marked out of 0.50

Which of the following instructions are not valid?

Select one or more:

- ✓ MOV DS, B800h
- MOV AX, SI
- ✓ MOV AX, [BP+2]
- MOV SP, SS:[SI+2]

Question 11 Complete	Sign-extend number 1011 0101 (8-bit binary) to 16-bit					
Marked out of 0.50	Answer: 1111 1111 1011 0101					
Question 12 Complete Marked out of	The principle of cache memory relies on key features: locality of reference which involves spatial and temporal locality. Match the definition to keywords on the left					
1.00	Temporal locality the tendency for a processor to access memory locations that have been used recently ▼					
	Spatial locality the tendency of execution to involve a number of memory locations that are clustered ▼					
	tendency to use large cache and prefetch mechanism ▼					
Question 13	Which ones are not correct for static RAM?					
Complete	Select one or more:					
Marked out of 1.00	faster than dynamic RAM because they are made from capacitor					
	Cheaper than dynamic RAM because simpler chip controller					
	✓ Cost per bit is higher than dynamic RAM					
	Cost per bit is lower than dynamic RAM					
Question 14	Which of the following instructions are not legal addressing?					
Complete Marked out of	Select one or more:					
1.00	MOV AX, [DI]					
	MOV CX, [SI]					
	MOV AX, [BX+SP]					
Question 15	Structural components of computer include:					
Complete	Select one or more:					
Marked out of 1.00	✓ I/O					
	DMA					
	System interconnection					
	☐ Interrupt					
	✓ Central processing unit					
	✓ Memory					
	r isitioty					

Question 16	A memory chip has 12 address pins, determine the maximum memory words of this chip?				
Complete	Select one:				
Marked out of 1.00	4096				
	2048				
	2048K				
	4000				
Question 17					
Complete	Consider a magnetic disk drive with 8 surfaces, 512 tracks per surface, and 64 sectors per track. Sector size is 1 kB. What is the disk capacity				
Marked out of					
1.00	Answer: 262144				
Question 18	Choose correct features for SRAM and DRAM				
Complete					
Marked out of 1.00	SRAM Faster access time, cost more per bit, smaller size ▼				
	DRAM Slower access time, cheaper cost per bit, can manufacture with larger size ▼				
Question 19	The following sequence of instructions are executed. What is the correct value of AX, CX, DX at watch				
Complete	point?				
Marked out of	MOV AX,0020				
1.00	MOV CX,0010				
	MUL CL				
	watch point:				
	DX 0000 ▼				
	AX = 0200 ▼				
	CX = 0010 ▼				
	CX = 0010 ▼				
. 22					
Question 20 Complete	Which statements are correct for HDDs?				
Marked out of	Select one or more:				
1.00	 a. Bits are store randomly on disk surfaces 				
	 b. Head, Track, Cylinder are key parameters for access data on hard disk 				
	c. Bits are stored on tracks				
	d. Head, Track, Sector are key parameters for access data on hard disk				

5/31/2019

Question **21**Complete

Marked out of 0.50

Which are the correct inputs for XLAT instruction

Select one or more:

- look-up index must be loaded into DL
- DS:[BX] pointed to look-up table
- look-up index must be loaded into AL
- DS:[SI] pointed to look-up table

Question 22

Complete

Marked out of 1.00

What is the correct value of SI, AL (in hex) at watch point:

01: MOV SI, 300h 02: MOV AL, 10h 03: MOV CX, 7

04: Loop_label:

05: MOV [SI], AL
06: ADD AL,10h
07: INC SI

08: LOOP Loop_label

watch point:

SI 307h ▼

AL = 80h ▼

Question 23

Complete

Marked out of 1.00

To evaluate processor performance, the following indicators and formulas are used:

Cycles per instruction
$$CPI = \frac{\sum_{i=1}^{n} (CPI_i \times I_i)}{I_c}$$

Time to execute a program $T = I_c \times CPI \times \tau$

Or
$$T = I_c \times [p + (m \times k)] \times \tau$$

In which:

p: the number of processor cycles needed to decode and execute the instruction

m: the number of memory references needed

k: the ratio between memory cycle time and processor cycle time

τ: cycle time = 1/f

Which of the following system attributes affects cycle time $\boldsymbol{\tau}$

Select one or more:

- Instruction set architecture
- Cache and memory hierarchy
- Compiler technology
- Processor implementation

Question 24	To encrypt a byte value, use instruction.
Complete	Select one:
Marked out of 0.50	XOR
	AND
	NOT
	O OR
Question 25	In multiplication instruction, when the source operand is 8 bit, will be multiplied with source.
Complete	Select one:
Marked out of 0.50	AX
	AL
	Whatever general purpose register
	BX
Question 26	A system programmer needs to compute 449/2+358/4 (decimal). Instruct him to code in debug (number
Complete	must be in hex) with the least number of instruction counts.
Marked out of	
1.50	MOVANAGE
	Step 1: MOV AX,166 ▼
	Step 2: MOV CL,2 ▼
	Step 3: SHR AX,CL ▼
	Step 4: MOV BX,AX ▼
	Step 5: MOV AV OLDS =
	MOV AX,01BC ▼
	Step 6: ADD AX,BX ▼
	Step of the Extragent
Question 27	Convert 0.1015625 to IEEE 32-bit floating point format (1 sign+ 8 exponent + 23 mantissa)
Complete Marked out of	Answer: 3DD00000
1.00	, wild the state of the state o
Question 28	The instruction that loads the AH register with the lower byte of the flag register is
Complete Marked out of	Select one:
0.50	• LAHF
	PUSHF
	О АН
	SAHF

Question 29

Complete Marked out of 1.00

The following sequence of instructions are executed. What is the correct value of flag bits at watch point?

MOV AL, 0F

ADD AL, F1

watch point:

Zero flag (OF) =

set

Carry flag (CF) = set

Question 30

Complete Marked out of

1.50

Which are correct about 32 bit index registers of IA-32 processors:

Select one or more:

- ESI: 32 bit pointer to source memory in data movement instructions **4**
- ESH,EDH: 16 bit pointers to higher memory above 1M
- 1 SI: 16 bit pointer to source memory in data movement instructions
- * EDI: 32 bit pointer to destination memory in data movement instructions
- DI: 16 bit pointer to destination memory in data movement instructions

Question 31

Complete Marked out of

1.00

Select the correct sequence of instructions to compute -1024/128 (all values are in hex).

MOV AX,FC00 Step 1:

MOV CX,80 Step 2:

CWD Step 3:

IDIV CX Step 4:

Question 32

Complete Marked out of

1.50

A benchmark program is run on a 40 MHz processor. The executed program consists of 100,000 instruction executions, with the following instruction mix and clock cycle count:

Instruction Type	Instruction Count	Cycles per Instruction
Integer arithmetic	45,000	1
Data transfer	32,000	2
Floating point	15,000	2
Control transfer	8000	2

Calculate MIPS rate for this program

MIPS rate =
$$\frac{I_c}{T \times 10^6} = \frac{f}{CPI \times 10^6}$$

$$CPI = \frac{\sum_{i=1}^{n} (CPI_i \times I_i)}{I_c}$$

Answer: 25.80645161

22	
Question 33 Complete	What is the correct sequence of instruction cycle?
Marked out of	Step 6 Store result ▼
	Step 4 Fetch operand ▼
	Step 1
	Step 5
	Step 2 Fetch opcode ▼
	Step 3 Decode ▼
Question 34 Complete	Convert the 32-bit floating point number C4361000 (in hex) to decimal.
Marked out of 1.00	Answer: -728.25
Question 35 Complete	Write mask byte (in hex) to clear bit 2nd, 3rd, 5th of a byte value with AND instruction (LSB is 1st bit).
Marked out of 0.50	Answer: E9
Question 36 Complete	8088 is 16 bit processor, the maximum addressable memory is:
Marked out of	Select one:
0.50	○ 640M ○ 640K
	1024K
	● 64M
Question 37	Write mask byte (in hex) to set bit 6th, 4th of a byte value with OR instruction (LSB is the 1st
Complete Marked out of	bit).
0.50	Answer: 28
Question 38	the instruction, CMP to compare source and destination operands by
Complete	Select one:
Marked out of 0.50	subtracting
	adding
	comparing

5/31/2019

Question 39
Complete

Marked out of

A benchmark program is run on a 40 MHz processor. The executed program consists of 100,000 instruction executions, with the following instruction mix and clock cycle count:

Instruction Type	Instruction Count	Cycles per Instruction
Integer arithmetic	45,000	1
Data transfer	32,000	2
Floating point	15,000	2
Control transfer	8000	2

Calculate the execution time for this program.

Given:

$$T = I_c \times CPI \times \tau$$

$$CPI = \frac{\sum_{i=1}^{n} (CPI_i \times I_i)}{I_c}$$

Answer: 0.003875

Question 40

Complete

Question 42

Complete

Marked out of

1.00

the memory stack area of a program shown in figure

Address 1D50 1D51 1D52 1D53

Value AF 90 71 DA

The value of SP register is 1D50. What is the value of SP follows the execution of **PUSH SI**

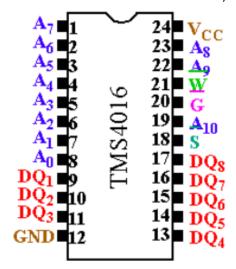

Answer: 1D48

Question 43

Complete

Marked out of 1.00

Choose the correct structure of memory chip as shown below

Note:

DQ: Data pinout

Select one:

- DRAM 2Kx8-bit
- SRAM 1Kx16-bit
- SRAM 2Kx8-bit
- DRAM 1Kx16-bit

Question 44

Complete

Marked out of 1.00

Given 8-bit floating-point binary format:

1 (sign) + 3 (exponent) + 4 (mantissa)

Convert the 8-bit floating point number 68 (in hex) to decimal.

Answer:

12.0

Question 45

Complete

Marked out of 2.00

Choose correct RAID volume definitions for a request 2T storage.

RAID 0 -Striped volume

 $2 \times 1T$ HDDs are needed, enhance data transfer, no fault tolerance, data lost when one HDD fails

RAID5 Volume

At least 3 x 2T HDDs, fault-tolerance, no data lost, no down-time

RAID 1 -Mirror volume

2 x 2T HDDs are needed, no data lost when the primary storage fails

Spanned Volume

2T HDD + more HDDs to extend storage, no fault tolerance, data lost when one HDD fails
